Hello dear trading bros . I am Daniel from Malaysia , I come from a normal family , right now is still a student with a passionate of trading .First of all , I want to thank my dad , for introducing me to forex world since August 2016 . I want to adknowledge two of the indis , Projectreaper AutoRegression MACD is coded by a good coder , Mr.Sergey from Russia . I am not a guru , FOC ,the purpose is to share my kind of Holy Grail with my trading buddies . I am teaching by using indicators where it tells you before where the market went , the indicators have no chance of repainting , instead of being a 'prophet guru' teaching by the backtesting the naked chart is like selling snake oil without real prints of indicators' logic . One shouldn't be full time trader and make forex as main income it is basically gambling your life (and that's why I am still studying lol)

Before you want to take up the knowledge with me in this field, I expect you to make a logbook like this, and find the flaws of 3/5 rules of this system, so we can make improvement together or else it wont benefit you, and I, you will not be familiar with this system, hence it will cause you to lose money in the market.

Backbone rules of TMMA Histo.

TMMA Histo Idea

Buy

H4 and D1 both aligns White + Blue APB Candle .

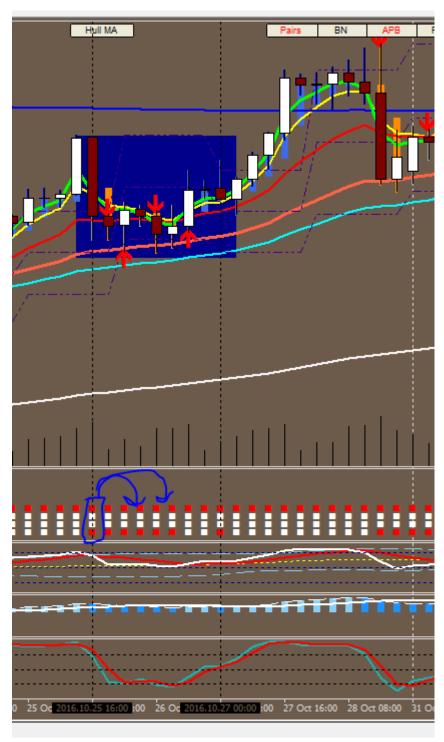

Sell

H4 and D1 both aligns Red + Red APB Candle.

TP

Fibo skills /EMA logics/Auto Regression Channel .

TMMA Histo could indicate where the price begins to range, counter trend and trending, but should you follow it without SNR? No.

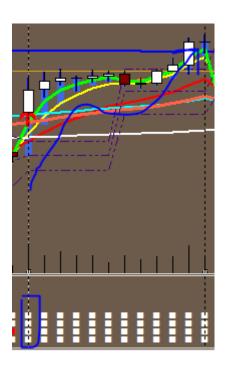

RedWhiteWhiteRed/WRRW=Ranging Pattern

Another example of ranging .

Trending indication . Both of the bottom 2 reds align , for a sell , so should you just straight selling away , with a blindfold ? No .

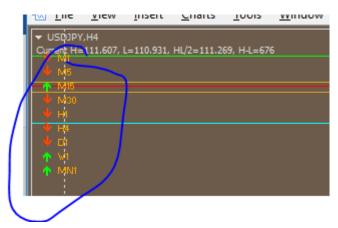

Another example. Of Trending up.

Remember don't catch the trend in the midst, it might end where you enter! Always be attentive in the market is where your profit come, otherwise.....

Another example . Of Trending up.

Addition of trend analyzing . (not in rules)

Crossover of Ema 5+EMA 50.

Entry

SNR Price Action , Check TDI RT Clone on smaller timeframe to reconfirm the movement especially the Pivot points or SNR /SND . BN(Big number)

Make sure the waves after 2 circles doesn't break the high , so the TP1 n 2 is valid , but please place TP above them for safety purpose . Additional SnD for better confluence .

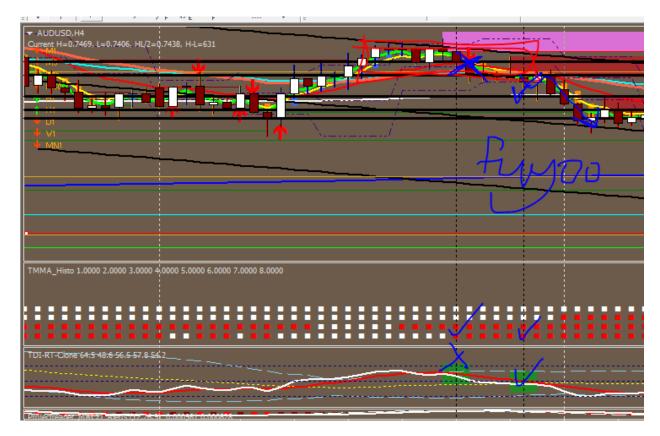

Like I said, Place your TP below TP1 for safety purpose.

Counter trend is tick Ranging pattern syndrome indi is bad (cross)

All of the time, the signal after ranging less likely to break the consolidation box at first, it's wise to control your risk and tp where the edge of box is. Never ever straight sell/buy away, please keep in mind wait for price to hit snr for entry, this is tricky and patience game. Always use TDI to reconfirm.

Wait the price to break the box for a clearer trend please .

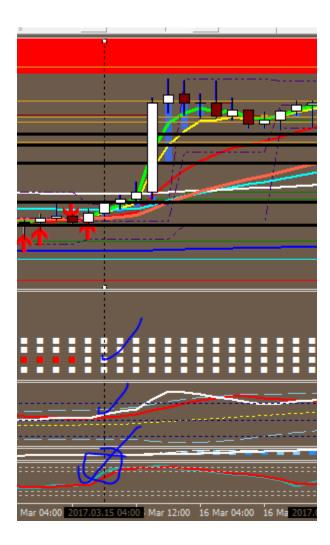

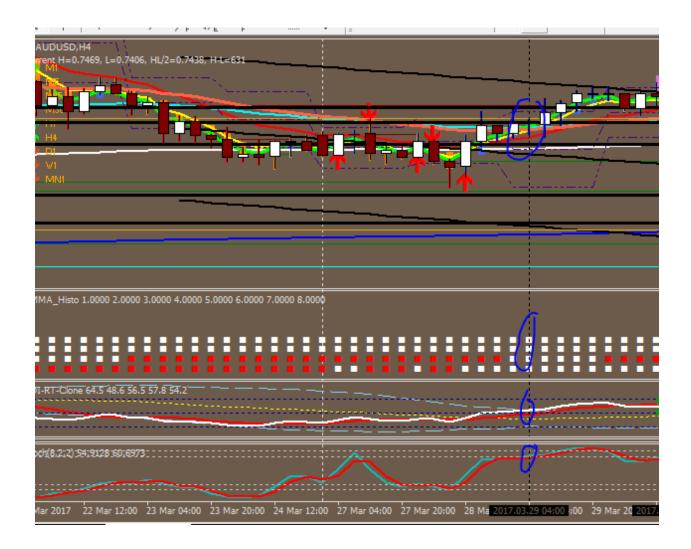

New system Add Stot (8,3,3) Zone 25 , 50 , 75 Red over blue= sell@horizontal25 50 buy@horizontal50 75

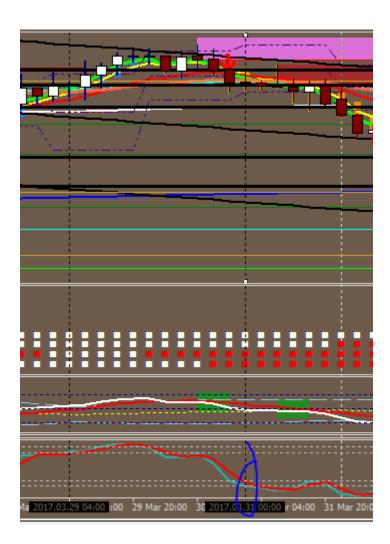

Advantage: When Tdi isn't below yellow line, but red over blue, touched the horizontal lines = sell.

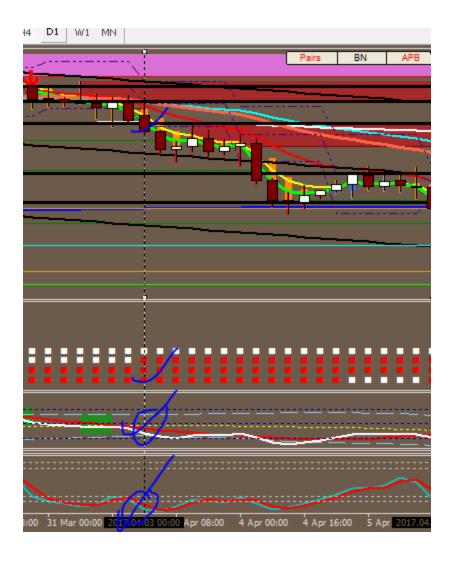

Disadvantage:

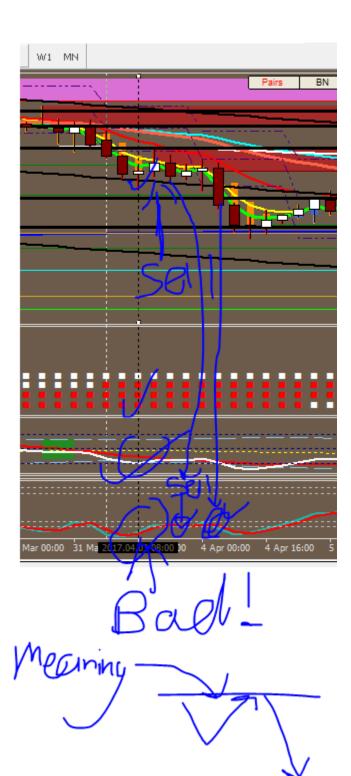

Obviously lose lol , but not likely if you read till the end .

Box action is important .

Method 1: TMMA doesn't approve , but Method 1 tdi above yellow , closes above ema13 . (3/5) Worth a buy .

In this case , tmma sell , tdi bounce down from red , but not yet below yellow line , stot Is in sell zone . sell!!! (4/5)

In brief for what I learn so far , there can be 4 components of technical rules .

You DON'T straight away SELL/BUY after the dynamic , market has to retrace to nearby SNR and bounce . Retest and bounce technique to increase your amount of pips .

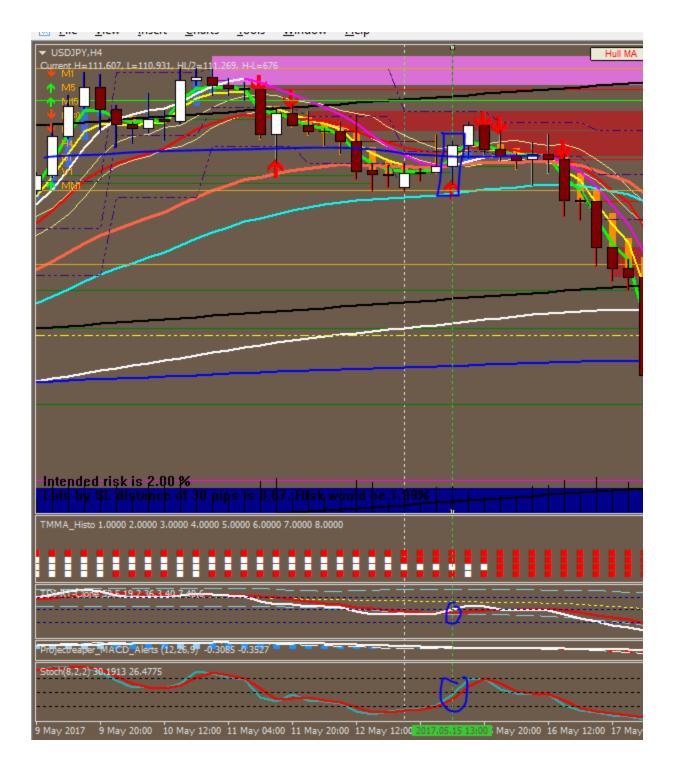

23/5/17 Most important lecture .

- 1 TMMA
- 2. TDI Cross
- 3. TDI (above/below yellow line)
- 4. EMA13
- 5. Stot zones.

In the end, we need 3/5 rules comply to know the dynamic .I have spent million seconds to get the best rule, however, the answer is to get the best quality signal 5/5 rules, you might be wrong, and missed out the 3/5 rules' profit. Welcome to the market.

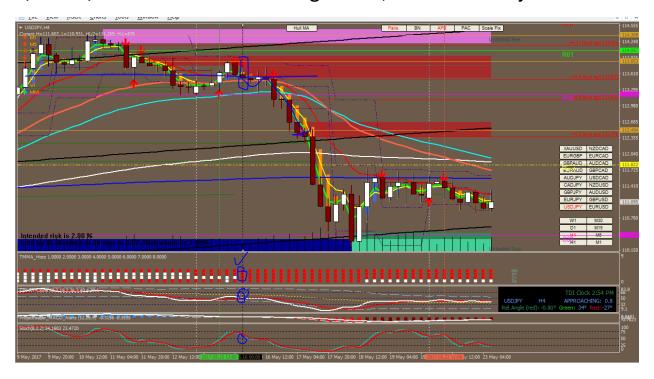

4/5 TnC = Success.

3/5 success.

3/5 or 4/5? The white is crossing down, hence it's subjective. lol.

5/5 take note , if your previous trade went from 3/5 to 2/5 and below , you might need to exit .

2/5 you wanna sell? I don't think so . To be strict, the tdi aint below the yellow line man .

Now 5/5 but we need to consider where the tp is , always play safe when we know we're in the box .

4/5 .we should know where the edge of box is , to tp safely like Fly Emirates .

1/5 – You're just gambling .Hahahaha

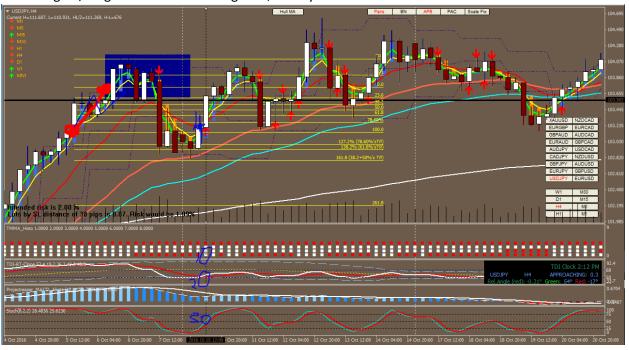

3/5 – Good trade .

Chi Chang ! 3/5 Again. TP where the box's edge is , like Fly Emirates 0 accident .

Chi Chang! 3/5 Again. TP where the Highs is , like Fly Emirates 0 accident .

4/5 — Broker is crying . huhuhu. (I don't draw the arrows , I expect you to absorb the break and retest SNR action .)

Done for the day ;-) Back to real life . See you next day .
